Requested Patent: ☐ JP10108877
Application Number: JP19960264861 19961004
Priority Number(s):
IPC Classification: A61F13/15 ; A41B13/04 ; A61F5/44
EC Classification:
Equivalents: SG65023

Abstract

PROBLEM TO BE SOLVED: To make characters written on a diaper visibly identified even in the state of not being worn by writing the characters in the portion of the diaper where sheet members forming right and left side edges are overlapped and secured.
SOLUTION: A securing portion in the side edge portion of a diaper comprises a plurality of straight portions 9A extending in the lateral direction in vertically upper and lower areas of the girth following the side edges, and in a vertically central portion 9B thereof on which are written characters. The securing portions 9A and 9B are surrounded with non-securing portions 31 (thickness T). The thickness of the portion 9A is t_A and the thickness of the portion 9B is t_B , where $t_A, t_B < T$. Since those characters may be recognized from outside the diaper, they may be utilized for displaying trade names, etc.
